### Quality Assurance in Gamma Camera

Lin Wen-Chun Department of Nuclear Medicine, Kaohsiung Veterans General Hospital

# Factors affecting image formation

- Distribution of radiopharmaceutical
- Collimator selection and sensitivity • Energy resolution
- Uniformity
- Spatial resolution
- Count rate performance
- Center of rotation misalignment Patient motion
- Attenuation

#### **Quality Control Practices**

- Daily QC
- Energy Peaking
- Uniformity: Extrinsic or Intrinsic flood - Sensitivity Measurement
- Weekly QC: with PLES or four-quadrant bar phantom.
- Spatial Resolution, Linearity : Extrinsic or Intrinsic Pixel size
- Monthly QC
- High count Uniformity calibration (200 million count) - C.O.R. (center of rotation)

ICANL (I

Daily QC

- Energy Peaking
- Uniformity: Extrinsic or Intrinsic flood
- Sensitivity Measurement

#### Daily QC

- Peak: daily for  $^{\rm 57}{\rm Co},\,^{\rm 99m}{\rm Tc},\,$  & other isotopes to be used that day.
- Uniformity: Flood images of 15-30 million counts each day of use, before imaging begins.
- Extrinsic flood image is preferred and tests heavily used collimators.
- Intrinsic flood image to test detector only, especially at the periphery of the FOV.

# **Energy Peaking** Tc99m 2000 126 110

Uniformity
------------

Uniformity Correction is a Calibration
--

- Intrinsic Calibration requires
   Precise point source background and scatter free
   Correct count rate
- Extrinsic Calibration
- Planar flood source
- Required for each collimator
- Includes intrinsic calibration

# **Spatial resolution**

#### **Spatial Resolution**

- Providing images sharpness or detail.Factors affecting spatial resolution include:
- collimator resolution (the main factor in nuclear medicine). System sensitivity requires certain diameter of the collimator holes etc.
- intrinsic resolution (due to the statistical variation which is photon energy dependent).

Methods for Evaluating Spatial Resolution

- Organ phantom measurement (qualitative) such as brain phantom.
- Bar phantom measurement (quantitative). There are a number of phantoms: four quadrant bar phantom, parallel-line phantom, orthogonal hole phantom.

#### Acquisition Method

- Resolution: Intrinsic (preferred) or Extrinsic image of 5-15 million counts of four-quadrant bar phantom. matrix: 256x256.
- Linearity: Intrinsic (preferred) or Extrinsic images of 5-15 million counts with PLES or four-quadrant bar phantom. matrix: 256x256.

E	Extrinsic I	Resolution	
3.5 mm bars	3.0 mm bars		(STERNAR STREET)
2.0 mm bars	2.5 mm bars	The second second second second	L

Г

# Monthly QC

- High count calibration floods ( 200 million count ) - Center Of Rotation

# Monthly QC

- High count calibration floods ( 200 million count )
- C.O.R. (center of rotation): with collimator, use 3 or 5 point source

# **Center of Rotation**

# COR Acquisition is a Calibration

- Used to correct patient images
- Extrinsic calibration for both 180<sup>o</sup> and 90<sup>o</sup> detector separations
- Must follow manufacturer recommendations regarding number and placement of sources
- Sources must have sufficient activityCompleted monthly

# Quarterly QC -Deluxe Jaszczak Phantom ar 18 1. Used for evaluation of overall performance of tomographic Used for evaluation of occurs performance in a significant of the significan

(C). section containing empty (cold) spheres ranging from 9.5 to 31.8 mm in diameter for evaluation of cold-sphere contrast (D). section containing solid (cold) rods ranging from 3.2 to 11.1 mm in diameter for evaluation of reconstructed spatial resolution (E). Images in C-E have been analytically corrected for attenuation.

0	0		<ul> <li>Quarterly acquire SPECT phantom studies with 2-3 time counts obtained clinically.</li> </ul>
			<ul> <li>Reconstruct at highest resolution fliter.</li> <li>Look for bullseye artifacts. If present, new</li> </ul>
	.0		intrinsic correction floor needed. Look for consist
	$\odot$	0	 transaxial resolution. If resolution loss, acquire new COR.

# Conclusions

- Standard QC procedures for gamma cameras required in accreditation programs.
- SPECT uniformity correction and COR are camera calibrations.
- SPECT demands strict QC program.
