膀胱癌診療原則

v.1.2016

膀胱癌醫療團隊擬定

2016年4月26日修訂

注意事項：這個診療準則主要作為醫師和其他保健專家診療癌症病人參考之用。
假如你是一個癌症病人，直接引用這個研究資訊及診療準則並不恰當。
只有你的醫師才能決定給你最恰當的治療。

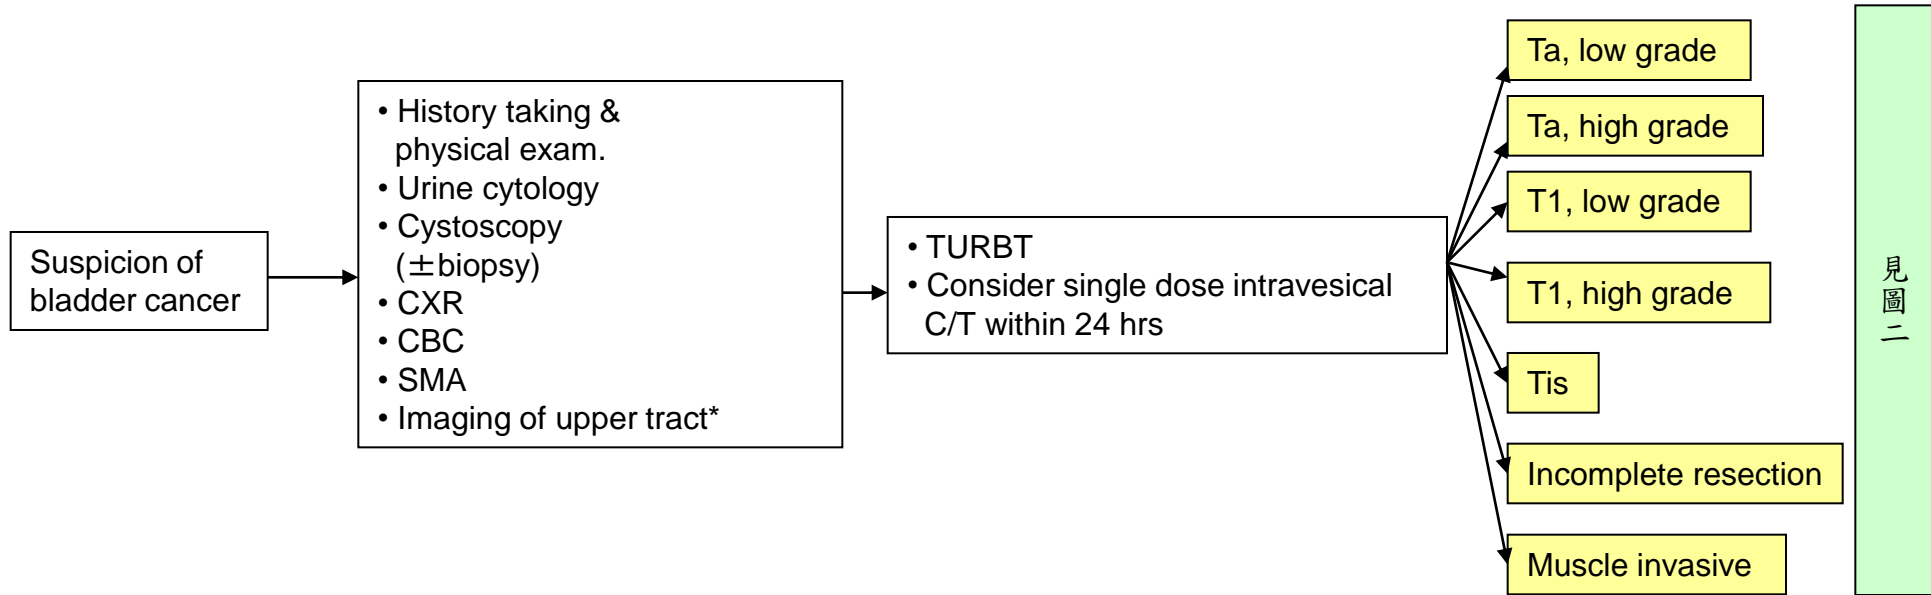

2016 VGHKS Guideline for Management of Bladder Cancer

Principle of surgical management

TURBT: Papillary

- Adequate resection with muscle If papillary high-grade lesion
- Re-resection If incomplete initial resection, no muscle in specimen or large lesion

TURBT: Tis

- Multiple random biopsies
- Biopsy adjacent to tumor
- Prostate urethral biopsies

TURBT: invasive

- Repeat re-resection:
 - ▶ If no muscle in biopsy
 - ▶ Small fragment of T2 insufficient to attribute risk
- Repeat TURBT should be considered if first TURBT does not allow adequate staging or attribution of risk factor for treatment selection or when using bladder-preserving treatment by chemotherapy and/or RT

PARTIAL CYSTECTOMY

- Solitary lesion in location amenable to segmental resection with adequate margin, no Tis
- Pelvic lymphadenectomy should be performed in conjunction with the segmental cystectomy

RADICAL CYSTECTOMY

- Radical cystectomy should include bilateral node dissection at a minimum including common, internal and external iliac nodes, and obturator nodes

Non-Urothelial carcinoma of urinary bladder

Same as Urothelial cell carcinoma management with the following Issues:

Mixed Histology

- Urothelial carcinoma plus pure squamous, glandular adenocarcinoma, micropapillary, nested, plasmacytoid, sarcomatoid should be identified because of the potential to have a more aggressive natural history.
- Follow Urothelial Carcinoma of the Bladder guidelines with complete response less likely if bladder sparing considered

Pure Squamous:

- Cystectomy, RT, or other agents commonly used with squamous cell carcinoma of other sites such as 5-FU, taxanes, methotrexate, etc.

Adenocarcinoma

- Radical cystectomy or partial cystectomy
- Conventional chemotherapy (eg, MVAC) for urothelial carcinoma is not effective, however, the use of chemotherapy or RT should be individualized and maybe of potential benefit in select patients.
- Consider alternative therapy or clinical trial

Any Small-cell component:

- Neoadjuvant or adjuvant chemotherapy using small-cell regimens and local treatment (cystectomy or radiotherapy)
- Primary chemotherapy regimens similar to small cell lung cancer. see small cell lung cancer Guidelines

Urachal Carcinoma:

- Requires complete urachal resection
- Conventional chemotherapy for urothelial carcinoma is not effective, however, the use of chemotherapy or RT should be individualized and maybe of potential benefit in select patients.

Primary Bladder Sarcoma

- See Soft Tissue Sarcoma Guidelines

Follow-up after cystectomy

After a radical cystectomy

- Urine cytology, creatinine, electrolytes, every 3 to 6 months for 2 years and then as clinically indicated
- Imaging of the chest, abdomen, and pelvis every 3 to 12 months for 2 years based on risk of recurrence and then as clinically indicated
- Urethral wash cytology, every 6 to 12 month ; particularly if Tis was found within the bladder or prostatic urethra
- if a continent diversion was created, monitor for vitamin B12 deficiency annually

After a partial cystectomy

- Same follow-up as above, in addition to the following:
 - ▶ Serial cytologic examinations and cystoscopies at 3-month intervals to monitor for relapse in the bladder

Principle of intravesical treatment

Intravesical chemotherapy:

Initiated within 24 hours after resection

Regimen: epirubicin 50mg or mitomycin-C 30mg in 50cc normal saline

Induction therapy: initiated 2 weeks after resection, weekly for 6 weeks

Maintenance therapy: role uncertain

Intravesical BCG therapy:

- Induction therapy:
 - Initiated 2-4 weeks after resection
 - Once weekly for 6 weeks
 - Regimen: 81 mg BCG in 50cc normal saline
- Maintenance therapy
 - 81 mg BCG intravesical instillation once weekly for 1-3weeks at 3rd, 6th, 12th, 18th, 24th month
 - Regimen: 81 mg BCG in 50cc normal saline

2016年第一版

* Perioperative chemotherapy (Neoadjuvant or Adjuvant)

Regimens :

Regimen	Dosage	
Dose-Dense MVEC	Methotrexate	30MG/M2 on D1 or D2 of a 14 day cycle
	vinblastine	3MG/M2 on D1 or D2
	Epirubicin	45MG/M2 on D1 or D2
	Cisplatin	70MG/M2 on D1 References:NO2
MVEC	Methotrexate	30MG/M2 on D1,15,22
	vinblastine	3MG/M2 on D2,15,22
	Epirubicin	45MG/M2 on D2 References:NO3
	Cisplatin/Carbopatin	70MG/M2 on D2/AUCx4~6MG
Gemcitabine/Cisplatin	Gemcitabine	1000MG/M2 on D1,8,15 of a 28 day cycle
	Cisplatin/Carbopatin	70MG/M2 on D2/AUCx4~6MG References:NO4

註：1.CCr < 60使用Carbopatin 2.This dose should not combined with radiation

* First-line chemotherapy for metastatic disease

Regimens :

Regimen	Dosage	
Dose-Dense MVEC	Methotrexate	30MG/M2 on D1 or D2 of a 14 day cycle
	vinblastine	3MG/M2 on D1 or D2
	Epirubicin	45MG/M2 on D1 or D2
	Cisplatin	70MG/M2 on D1 References:NO2
MVEC	Methotrexate	30MG/M2 on D1,15,22
	vinblastine	3MG/M2 on D2,15,22
	Epirubicin	45MG/M2 on D2 References:NO3
	Cisplatin/Carbopatin	70MG/M2 on D2/AUCx4~6MG
Gemcitabine/Cisplatin	Gemcitabine	1000MG/M2 on D1,8,15 of a 28 day cycle
	Cisplatin/Carbopatin	70MG/M2 on D2/AUCx4~6MG References:NO4

註：1.CCr < 60使用Carbopatin 2.This dose should not combined with radiation
