

# A mosquito bite is a piece of cake?

Don't neglect **dengue hemorrhagic fever**: without timely treatment, **mortality is up to 50%**.

## Possible symptoms and high risk groups of dengue hemorrhagic fever

### Symptoms:

- Frequent vomiting
- Black-colored stools
- Bleeding from gums
- Drowsiness, breathing difficulty
- Other symptoms: red spots or patches on the skin, bleeding from nose, vomiting blood, severe abdominal pain, mental confusion or seizure, etc.

### High risk groups:

- People with chronic illness (e.g., diabetes mellitus, hypertension)
- People with weakened immune systems (e.g., elderly, children)
- People that have been previously infected with different types of dengue viruses

## Typical symptoms of dengue fever

## How to prevent infection:

- ☑ Empty containers and ornamental fountains or cover them with covers.
- ☑ Clean vases and ornamental fountains weekly.
- ☑ Flatten canvas covers and fill up holes on the ground.

Get rid of mosquitoes indoor and outdoor

Prevent epidemic from morning to night

Approved by the competent authority

- Avoid being outdoor during peak biting times for mosquitoes
- Wear mosquito repellent to cover exposed areas
- Wear long, light-colored shirts and pants

Outdoor

● Window screenpants

● Mosquito net

● Mosquito swatter

● Have mosquitofish and guppy at home

● Mosquito zapper

Indoor
